- No devices required

Physical Card Sorts

- No devices required
- Can be produced quickly and cheaply

Physical Card Sorts

- No devices required
- Can be produced quickly and cheaply
- Focus for in-class groupwork

Physical Card Sorts

- No devices required
- Can be produced quickly and cheaply
- Focus for in-class groupwork
- Produces a different kind of group engagement

Concept Check

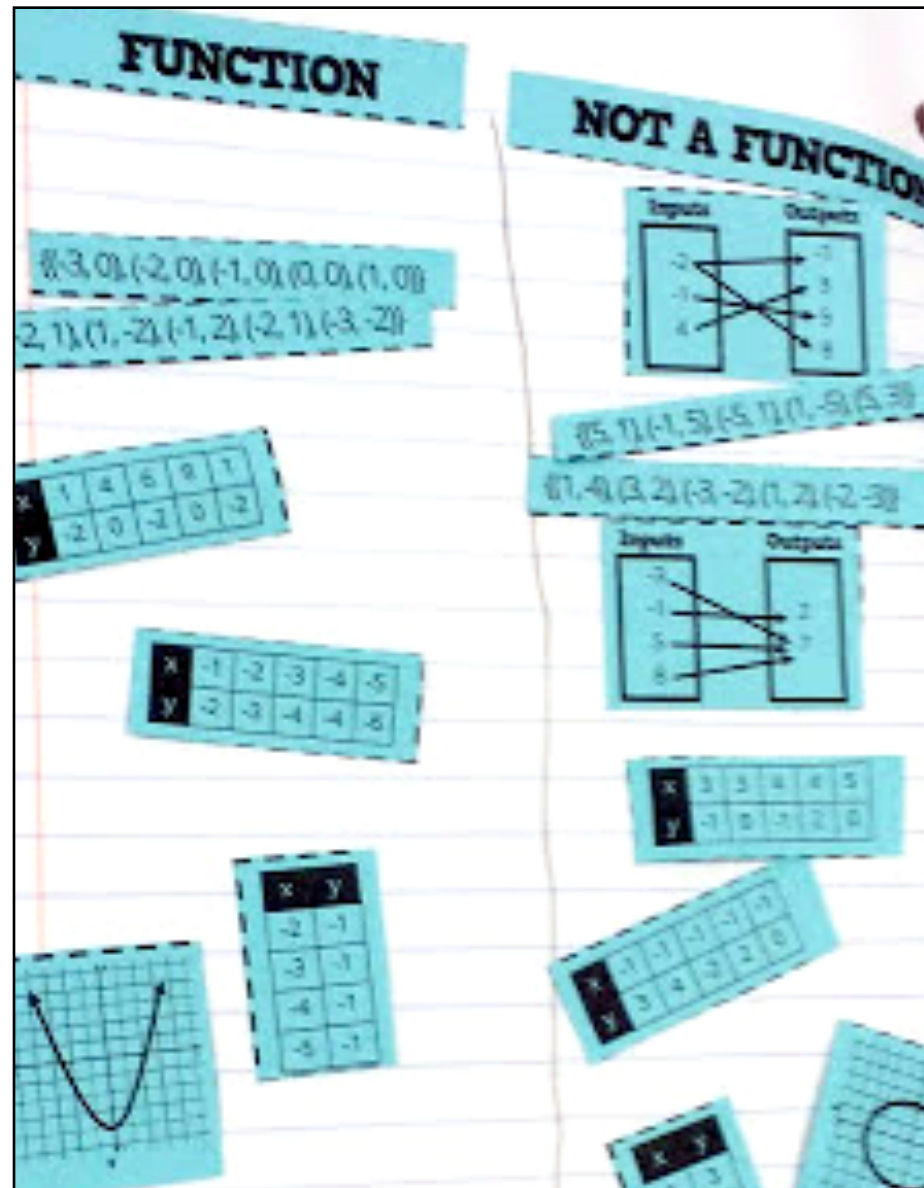

Concept Check

Example: Function or Not?

Concept Check

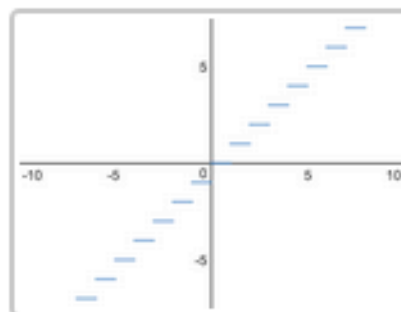

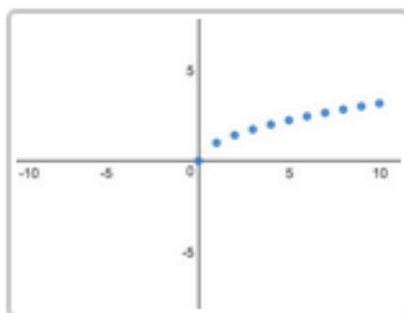

Example: Function or Not?

Students are given a mix of graphs, equations, tables, relation maps, or descriptions, and sort them into functions and non-functions.

Math Equals Love Blog: Function or Not a Function Card Sort

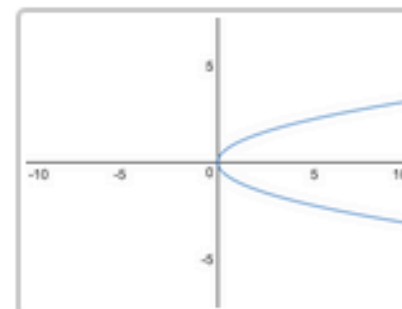

Sort these cards into two groups—one group of functions, and one group of not-functions.

Function

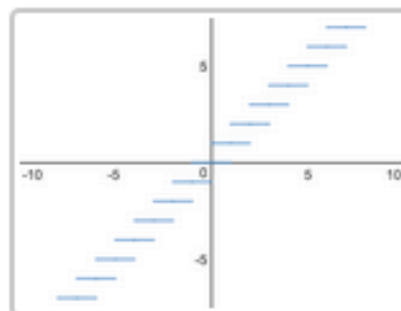

Not a Function

In a class of ninth graders, the relationship between student (independent variable) and height (dependent variable).

$$y = \pm\sqrt{x}$$

In a class of ninth graders, the relationship between shoe size (x -axis) and height (y -axis).

$$y = |x|$$

Desmos Card Sort: Functions

Moving to the Next Level

Moving to the Next Level

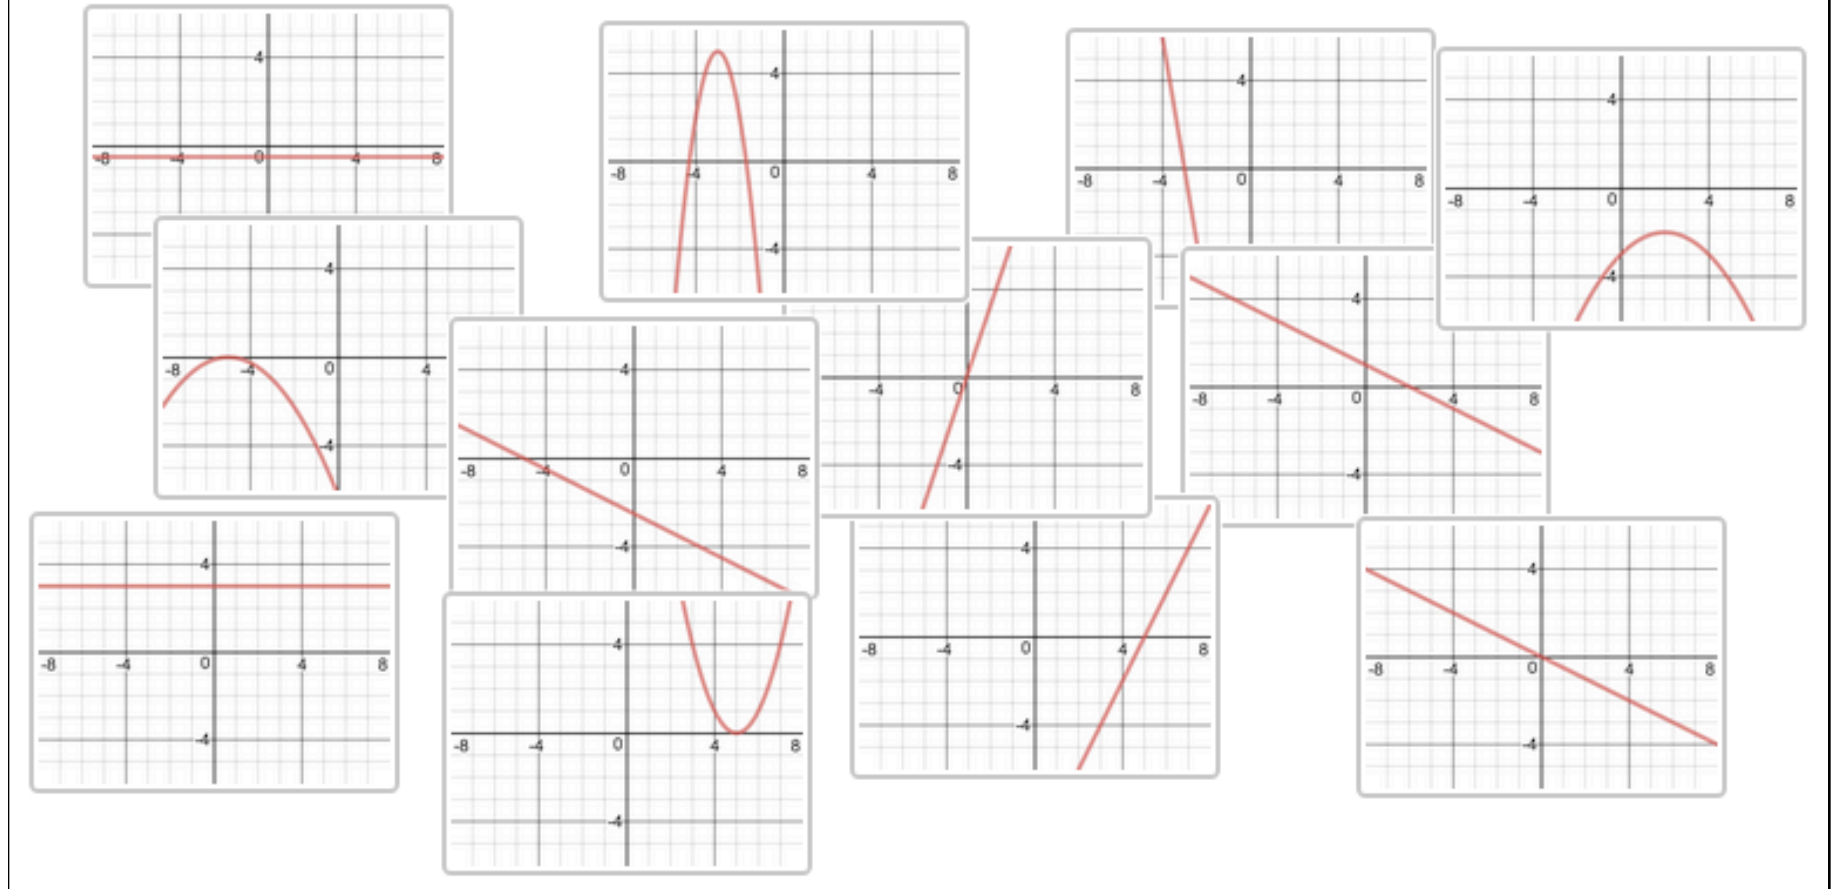

Example: Derivative Match

Moving to the Next Level

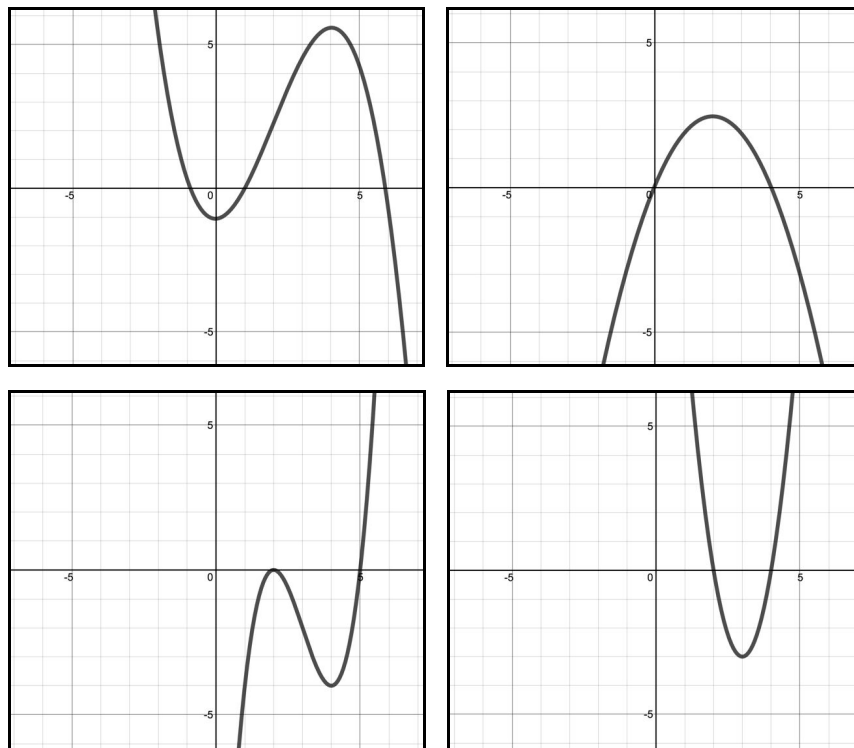

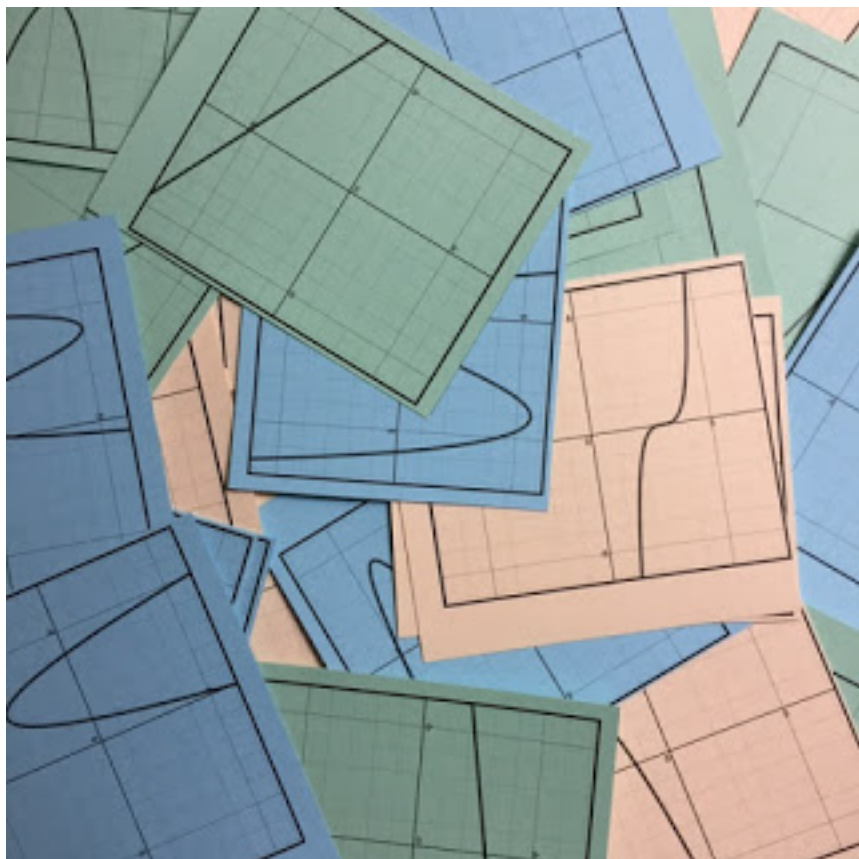

Example: Derivative Match

Students are given a set of graphs, and must find pairs that represent a function and its derivative (or a function and its integral).

Match each function with its derivative.

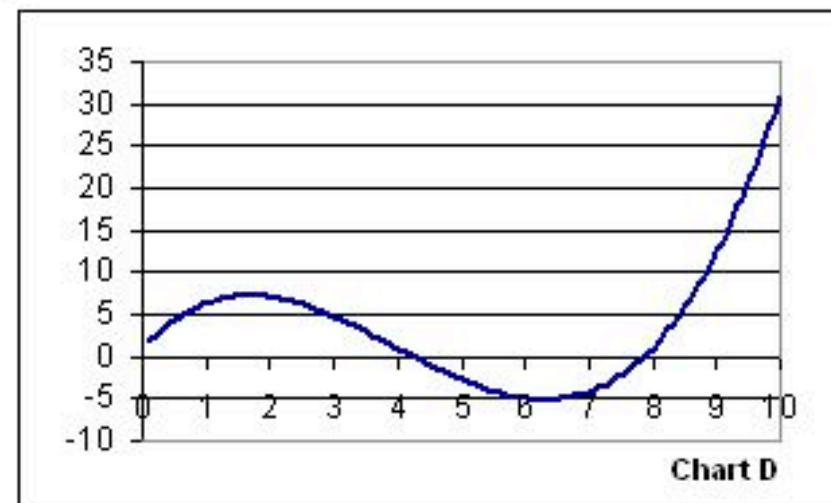

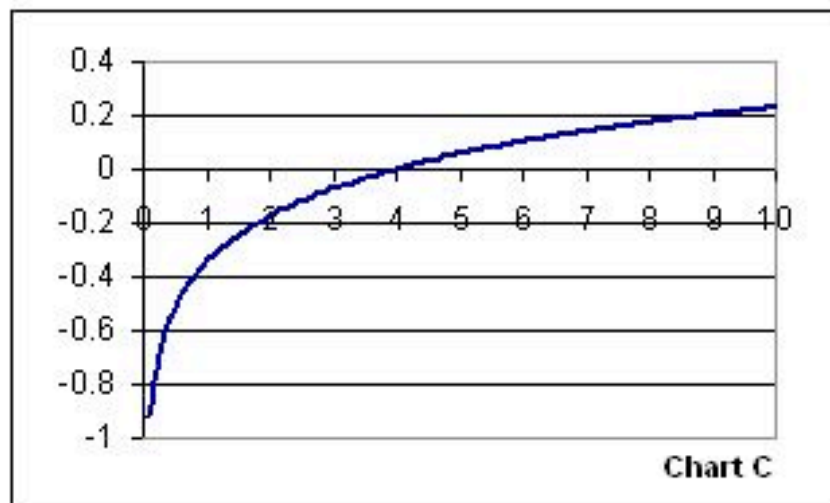

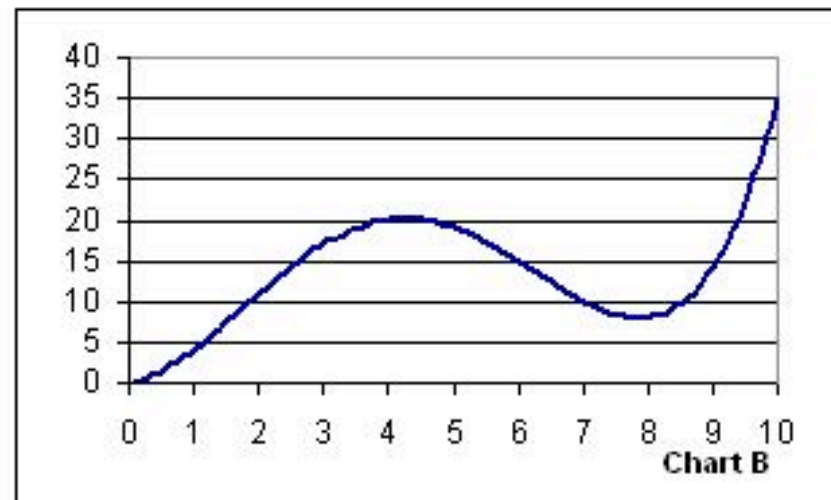

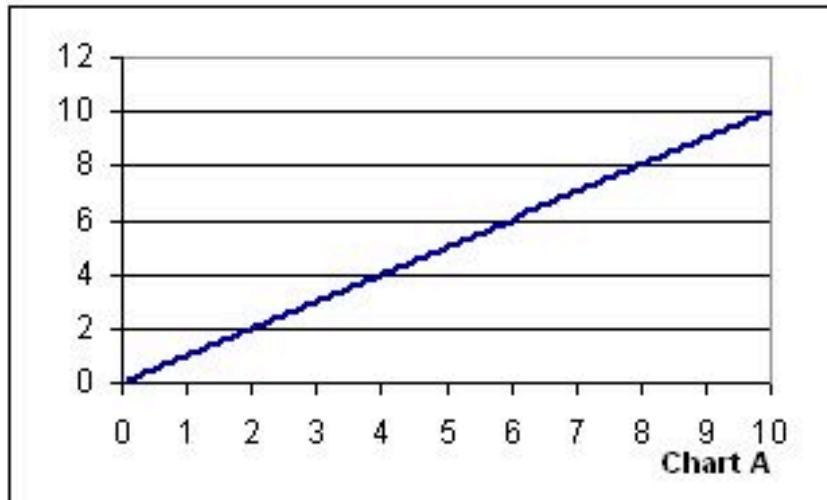

Desmos Card Sort: Derivative Match

Engaging Math Blog: Derivative Matching Cards

The graphs of six functions and the graphs of their integrals have been mixed up below. Can you match them together?

NRichMaths.org: Integration Matcher

Summative Activity

Summative Activity

Example: Exponents

Summative Activity

Example: Exponents

Students are given a set of cards with algebraic expressions involving exponents, and must sort them into piles of equivalent expressions.

$$\frac{x}{y}$$

$$x^4(x+x')$$

$$\frac{x^{10}}{x^5}$$

$$(xy)^2 \left(\frac{x^2}{y}\right) \left(\frac{y^2}{x}\right)$$

$$\frac{xy^2}{x^2y}$$

$$\frac{x^3}{x^{-2}}$$

$$\frac{10x^7}{5x^2}$$

$$x^5$$

$$1x^6 - 3x^6$$

$$\frac{10x^7}{10x}$$

$$\frac{xy^4x^{-1}}{y^2}$$

$$y\left(\frac{1}{x} + \frac{1}{y}\right)$$

$$\frac{1}{2}(xy+x^2)$$

$$(x^2+x^3)^0$$

$$6x^5 - 4x^5$$

$$3x^5 - 2x^5$$

$$2x^5$$

$$x^2x^3$$

$$\left(\frac{y^{-1}}{x}\right)^{-1}$$

Determine which expressions are equivalent to each other. Assume that all variables are not equal to zero. When finished, you should have 12 sets of equivalent expressions; not all sets have the same number of elements. List the labels for each of the sets of equivalent expressions below.

Prerequisite Review

Prerequisite Review

Example: Lines

Prerequisite Review

Example: Lines

Students are given a mixed set of cards with graphs, tables of points, standard form equations, paired slopes & y -intercepts, and descriptions. Each line is represented by one card of each type, which students must match together.

Match each graph to its equation, its slope and y -intercept, its table of values, and its description.

Graph	Equation (1-10)	Slope & y -intercept (11-20)	Table (21-30)	Description (31-40)
A				
B				
C				
D				
E				
F				
G				
H				
I				
J				

has the steepest
negative slope of
all the graphs

38
is equivalent to
 $y - 10 = 3(x - 4)$

19
slope: -3
 y -intercept: 2

37
passes through the
point $(-6, 0)$

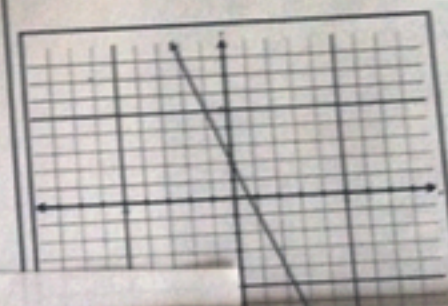

27

x	-2	2
y	-8	4

24

x	-2	2	4
y	-7	1	5

E

34
is perpendicular to
graphs F and G

11
slope: 2
 y -intercept: 3

3
 $2x - y = 3$

5
passes through
 $(-1, -1)$ and has
positive slope

4
 $3x - y = -2$

31
has the same slope
as graph B, but is
not graph B
